OneVue SENSE

Make manual monitoring and data logging a thing of the past and create a safer and more efficient facility.

Whether recording refrigerator temperature for vaccine storage or monitoring differential air pressure for a surgical suite, **OneVue Sense**™ puts you in touch with your environment.

Secure, state-of-the-art wireless sensors continuously monitor environmental conditions like freezer and refrigerator temperatures, ambient air temperature, humidity, and air pressure. The sensors communicate with our cloud-based OneVue® software platform to log the data for compliance and alert you if conditions warrant attention.

Temperature Monitoring Sensors

Continuously monitor and digitally log the temperature inside refrigerators and freezers to help protect valuable vaccines, irreplaceable lab samples, essential medications, or costly food.

Ambient Temperature and Humidity Sensors

Monitor critical areas like intensive care units, operating rooms, server centers, and patient quarters to stay within regulated indoor air parameters.

Differential Air Pressure Sensors

Monitor air pressure between spaces like negative pressure rooms, isolation areas, or construction zones to limit the spread of infection.

Water Leak Detectors

Monitor leak-prone or very sensitive areas like equipment rooms and heating, ventilating, and air conditioning systems to prevent leaks from turning into costly floods.

Contact Closure Sensors

Monitor the closed or open status of an essential refrigerator, freezer, window, or wander-prone patient's door.

> " Peace of mind is the biggest difference when using the OneVue system. It allows us to feel comfortable at all times — day or night, 24 hours a day. If there's any issue with our refrigerators, we know about it immediately. "

HASHIM ZAIBAK, DOCTOR OF PHARMACY AND OWNER OF HAYAT PHARMACY IN MILWAUKEE, WISCONSIN, ON HAVING ONEVUE SENSE SOLUTIONS WITH REAL-TIME ALERTS FOR OUT-OF-RANGE CONDITIONS AT HIS PHARMACY.

Eliminate Manual Recording
Save staff time by automating daily reporting tasks and easily exporting reports for compliance and audits by pairing with the cloud-based OneVue software platform

Protect Valuable Assets
Save money by reducing the risk of losing vaccines, organs, and tissues due to out-of-range refrigerator and freezer temperatures

Prevent Loss and Damage
Limit stress and patient care disruptions by preventing unexpected, costly damage or loss with proactive alerts for high-risk conditions

Maintain Comfort
Improve HCAHPS scores by keeping patients and visitors safe in your facility during procedures, construction, or weather events

Maintain Compliance
Protect key revenue streams and adhere to accreditation requirements of the CDC, FDA, TJC, and HCAHPS

Remote Access
Assess and troubleshoot alerts via the cloud-based OneVue software platform without having to be on-site

OneVue SYNC

The **OneVue Sync**™ timekeeping solution provides synchronized time to help keep everybody and everything within a healthcare facility on time. With a myriad of analog and digital clock options for high-traffic areas, systemwide synchronized time can help with:

- Accurately documenting coded events
- Delivering lab samples within a certain timeframe for accuracy
- Maintaining a high on-time surgical start rate
- Starting appointments on time regularly
- Ensuring the right patient receives the right medication at the right time
- Keeping patients informed of the time with versatile and contemporary-styled clocks
- Supporting general timeliness, which can help patient satisfaction rates remain high

Additionally, Code Blue and Countdown Timers are available to help healthcare staff stay within recommended treatment time guidelines and deliver optimal patient outcomes.

The OneVue Sync platform offers three different time synchronization technologies to support a wide range of applications and installations:
OneVue Sync Transmitter
A high-penetration 72 MHz frequency talks to devices throughout a building or campus with the option to leverage GPS or NTP acquired time.

OneVue Sync Bluetooth®
Clocks form a Bluetooth® Low Energy mesh network to transmit status and receive NTP time and other updates from the cloud-based OneVue® software utilizing a OneVue Sync Bridge.

OneVue Sync PoE Network
Clocks connect to a facility's network via Ethernet to transmit data to and download settings from the cloud-based OneVue software and to obtain time from an NTP server.

Unrivaled Signal Strength
Signals from 72 MHz OneVue Sync transmitters easily pass through common building materials used in healthcare and commercial construction

Customization
Custom dials are available for analog clocks to prominently display organization logos

Automatic Time Changes
OneVue Sync clocks automatically resynchronize after daylight saving time shifts and power outages

Power Options
Synchronized clocks can be powered by batteries, AC power, or through an Ethernet (PoE Network) connection

Interfacing with Other Systems
OneVue Sync clocks integrate with a variety of leading public address and life safety systems

Peace of Mind
OneVue Sync transmitters and clocks come with a 5-year standard warranty

OneVue NOTIFY

OneVue Notify® is a mass notification system that can display textual messages throughout a specific wing or ward, an entire building, or a multifacility health system.
When installed in patient-facing areas, OneVue Notify InfoBoard™ displays can offer visual messages to:

- **Direct patients or visitors** to where they need to be for care
- **Inform patients or visitors of wait times**
- **Communicate messages in loud environments** where audio messages could go unheard

When installed in staff-only areas, InfoBoard displays can:

- **Discretely inform staff** of a coded event, lockdown, or other emergency
- **Provide interdepartmental communication** regarding time-sensitive situations, like ER ambulance arrivals
- **Give staff hand hygiene reminders** to help prevent the spread of infectious diseases
- **Show morale-boosting messages**, like uplifting quotes or congratulations for special achievements

OneVue Notify can be used to quickly display five preset emergency-related messages, or users can create custom messages within the cloud-based OneVue® software platform. InfoBoard displays can also be helpful when needing to generate incident reports for auditing agencies.

Critical Notification Event History

Backward 1 Week | Start Date
Items per Page: 100

Event Start | Event End

When Seconds Count
Critical notification messages are displayed within seconds, providing mass communication quickly

Mass Notification Made Easy
Have the ability to create custom messages for displaying event information, wayfinding, or celebratory notes

Time Sync Solution
InfoBoard solutions display synchronized times and dates to keep your building occupants alert of their schedules at all times

Communicate to Hard of Hearing Community
Visual messages on InfoBoard displays allow hard of hearing individuals to receive notifications, alerts, or information

Incident Reports
InfoBoard displays help staff and auditing agencies stay up to date on events, whether regarding emergency notification or general messaging use

OneVue Sense™ Service and Support Plans

Healthcare facilities trust the Primex OneVue Sense environmental monitoring platform to protect valuables and provide staff peace of mind. Primex **OneVue Sense Service and Support** plans offer flexibility to help optimize workforces while keeping facilities compliant and safe.

The different Primex OneVue Sense Service and Support plan options provide varying levels of onboarding, usage and technical support, account optimization review, and hardware assurance for the OneVue Sense portfolio.

The Primex OneVue® Cloud-Based Software Platform

The Primex **OneVue software platform** simplifies administration tasks and allows users to easily manage Primex environmental monitoring, time synchronization, and mass notification solutions.

- For the **OneVue Sense** environmental monitoring solution, the OneVue software offers on-demand report generation, the ability to set customized alerts for out-of-range conditions, and gives users an around-the-clock, anywhere-accessible view of their continuously monitored asset data.
- For the **OneVue Notify**® mass notification solution, the OneVue software allows users to compose general messages that convey information across entire facilities or for specific areas within a building.
- For the **OneVue Sync™** synchronized timekeeping solution, the OneVue software enables users to manage all clocks within a building or campus and provides status alerts, eliminating the need to manually set clocks and limiting unnecessary trips to roofs, server rooms, or electrical closets.

Remote Access
Assess and troubleshoot alerts via the cloud-based OneVue software platform without having to be on-site

Eliminate Manual Reporting
Automate daily reporting tasks and generate on-demand data reports for proof of compliance during audits

7-Year Data Retention
Automatically logged data is kept within the OneVue platform for seven years and is easy to access when necessary

Single Sign-On Capability
Available within the Primex OneVue Sense Preferred Plan, single-sign-on technology lessens IT staff burden, simplifies the login process, and boosts cybersecurity

Secure Network
Collaborating with Amazon Web Services, the cloud-based OneVue software platform keeps your data secure and user information private
