

SNS™ Digital Clocks

SYNCHRONOUS NETWORK SYSTEM

SNS Personal Series LCD Clock

The Personal Series Clock uses your existing wireless (802.11 b/g) or Ethernet local area network to communicate with the Synchronous Network System (SNS) and synchronize with all SNS clocks in your facility. Using the SNS Applications Management Platform (AMP), diagnostic data is retrieved from the clocks, including the strength of the wireless connection, battery condition and time accuracy. The SNS system ensures the integrity and accuracy of every clock in your building.

Ideal for Offices and Patient Rooms

The Personal Series LCD clock offers both the accuracy of synchronized time along with the convenience and contemporary styling desired for personal space. With the ability to mount securely to the wall or stand on a desktop, the Personal Series clock offers great deployment flexibility.

Product Features
